DISCOVER DeScenza

diamond merchant and jeweler since 1915

**There's more to the cut
of a diamond than the shape**

The beauty of a diamond is how it handles light. A properly cut diamond will allow its 58 facets to act like tiny mirrors reflecting the light back through the top in a brilliant, rainbow blaze.

A shallow diamond appears larger, but less brilliant because much of the light has leaked out the bottom and is not reflected to your eye.

A diamond cut too deep is less brilliant and appears black in the middle because the light has leaked through the sides.
